```cpp
#include <iostream>

using namespace std;

class myclass

{

    int pageno;

    string title;

    public:

    myclass(int page_no,string pagetitl)

    {

        pageno=page_no;

        title=pagetitl;

    }

    friend int display(myclass x);

};

int display(myclass x)

{

    int c;

    string d;

    cout<<x.pageno<<endl;

    cout<<x.title;

 return 0;

}

int main()
```

```
{
    int x;

    string y;

    myclass p(234,"rajesh");

    display(p);

    //cout<<"c:"<<x<<"d:"<<y;

    return 0;

}
```
